K9 Bodycare Information

- I am a member of the following professional associations IRVAP, IAAT, Animal Osteopath Worldwide, Canine Massage Guild and Canine Conditioning Academy. My professional associations, training and credentials maybe check by visiting <https://www.irvap.org.uk>, <https://iaat.org.uk/find-a-therapist/>, <https://animalosteopathyworldwide.com>, <https://www.k9-massageguild.co.uk>, <https://canineconditioningacademy.co.uk/find-your-coach/>
- Training through:
 - ◇ London College of Animal Osteopathy – International Diploma in Canine Osteopathy – Int'l DipCO
 - ◇ Canine Therapy Centre – Clinical Canine Massage
 - ◇ Canine Conditioning Academy – Canine Conditioning Instructor
- Each year I am required and commit to a minimum of 25 hours CPD as part of the strong code of ethics and conducts required from professional associations.
- I hold my own professional indemnity and public liability insurance, which is audited annually.
- I always abide by the Veterinary Surgeons Act 1966 and Exemptions Order 2015 by never working on an animal without veterinary consent. As stated by the RCVS, "Physiotherapy" is interpreted as including all kinds of manipulative therapy" (Section 19.21), thus including massage therapy.
- **Canine Osteopathy Techniques** are based on classical structural osteopathy developed by Stuart McGregor, DO. This approach recognises the interrelationship between the body's structure and function, aiming to restore physiological balance and optimise biomechanical efficiency. Treatment focuses on identifying and correcting somatic dysfunctions, such as restrictions in joints, muscles, fascia, and other soft tissues. By improving mobility, relieving pain, and supporting the nervous, circulatory, and lymphatic systems, osteopathic intervention assists in restoring functional integrity, preventing compensatory strain, and enhancing the dog's overall functional health and well-being.
- **Clinical Canine Massage** is a manual therapy that targets the assessment and treatment of the musculature, fascia and associated soft tissues to restore optimal function. Massage interventions support rehabilitation and reconditioning of soft tissue injuries, orthopaedic conditions, and postural dysfunction, as well as pre- and post-operative care. By restoring tissue flexibility, promoting circulation, and reducing muscular tension, clinical canine massage aids in pain modulation, improves functional mobility, and contributes to the dog's overall physiological health and functional well-being.
- Canine conditioning and fitness programs employ structured, evidence-based exercises to optimise musculoskeletal strength, endurance, and neuromuscular coordination. These interventions target core stability, joint proprioception, and postural alignment to enhance functional mobility and reduce the risk of injury. By improving muscle balance, cardiovascular fitness, and motor control, canine conditioning supports overall physiological resilience, performance capacity, and functional well-being.
- Working closely with owners and their dogs, I tailor each treatment and aftercare plan to meet their individual needs and ensuring the best results.
- I comply with GDPR Compliance 2018 and the Data Protection Act 1998.
- I provide a high-quality professional service and compassionate care to all my clients, operating from my Studio in Carburton. The Studio provides a safe and nurturing environment for both dog and owner to relax, allowing me to really get to know and understand my clients. I am, however, happy to travel to owner's homes if they have difficulty in bringing their dogs to me.
- Participated in the world's first massage therapy clinical trials with Winchester University and Sparsholt University Center, commenced 2018. Please see the Canine Massage Guild Website for further information.

For more information, this can be found on my website www.k9bodycare.co.uk or I welcome your phone call on 07834 897661 or email k9bodycare@gmail.com
