Clinical Canine Massage & Conditioning

- Clinical canine massage supports and assists the muscular system, designed to help resolve common muscular issues such as myofascial pain, trigger points, rehabilitate & recondition soft tissue injuries. Supporting orthopaedic conditions as well as pre and post-operative care assisting mobility, movement, and pain management, which can have a detrimental effect on behaviour and quality of life. It is commonly used amongst sporting, working and performance competitors too.
- I specialise in the use of Myofascial Release, Remedial Sports Massage, Deep Tissue Massage and Swedish Massage as well as the Lenton Method: a set of direct Myofascial release protocols designed specifically to suite the dog's anatomy, LED Light Therapy; pulsating red and infra-red LED phototherapy, complementing canine massage to enhance and maximize the positive effects.
- Canine Conditioning exercises are suitable for any dog if they are not in pain or where their pain is being managed under the supervision of a veterinarian. Conditioning exercises will be given clients for issues identified such as generalized hindlimb weakness, Exercises are carried out at a slow pace and only on stable surfaces. Where an issue is identified which requires specialised investigations, I will refer the dog back to the veterinarian. I run regular Canine Core Conditioning classes which train a dog's core musculature, which in turn improves posture, gait, flexibility and strength.
- Working closely with owners and their dogs, I tailor each treatment and aftercare plan to meet their individual needs and ensuring the best results.
- By working closely with Veterinarians, physiotherapists, and other therapists in a multimodal approach we can achieve the best possible results for the wellness of the dogs we treat.
- I always abide by the Veterinary Surgeons Act 1966 and Exemptions Order 2015, by never working on an animal without Veterinary Consent. As stated by the RCVS, 'Physiotherapy', is interpreted as including all kinds of manipulative therapy (Section 19.21), thus including massage therapy. Manipulation under massage therapy is limited to (or refers to) soft tissue and testing a joints range of motion. **Please note** that I do not manipulate joints or the skeleton as part of my work, and concentrate purely on the application of safe, structured massage techniques.

About Jayne, K9 Bodycare

- I Jayne Strange am a member of International Association of Animal Therapists (IAAT). Trained with the Canine Massage Therapy Centre on the Clinical Canine Massage Practitioner Program and with the Canine Conditioning Academy on the CCA Instructor course – both externally accredited by LANTRA
- My professional membership, training and credentials may be checked by visiting <http://www.iaat.org.uk/therapist-finder/> and https://canineconditioningacademy.co.uk/?page_id=2256.
- I hold my own professional indemnity and public liability insurance and commit to a minimum of 25 CPD hours annually to continually update my training and professional development and in line with IAAT's and Canine Conditioning Academy's strong code of ethics and conduct.
- I provide a high-quality professional service and compassionate care to all my clients, operating from my Studio in Carburton. The Studio provides a safe and nurturing environment for both dog and owner to relax, allowing me to really get to know and understand my clients. I am, however, happy to travel to owner's homes if they have difficulty in bringing their dogs to me.
- I participated in the world's first massage therapy clinical trials with Winchester University and Sparsholt University Center, commenced 2018. Please see the Canine Massage Guild Website for further information.

For more information about me, this can be found on my website www.k9bodycare.co.uk or I welcome your phone call on 07834 897661 or email k9bodycare@gmail.com.
